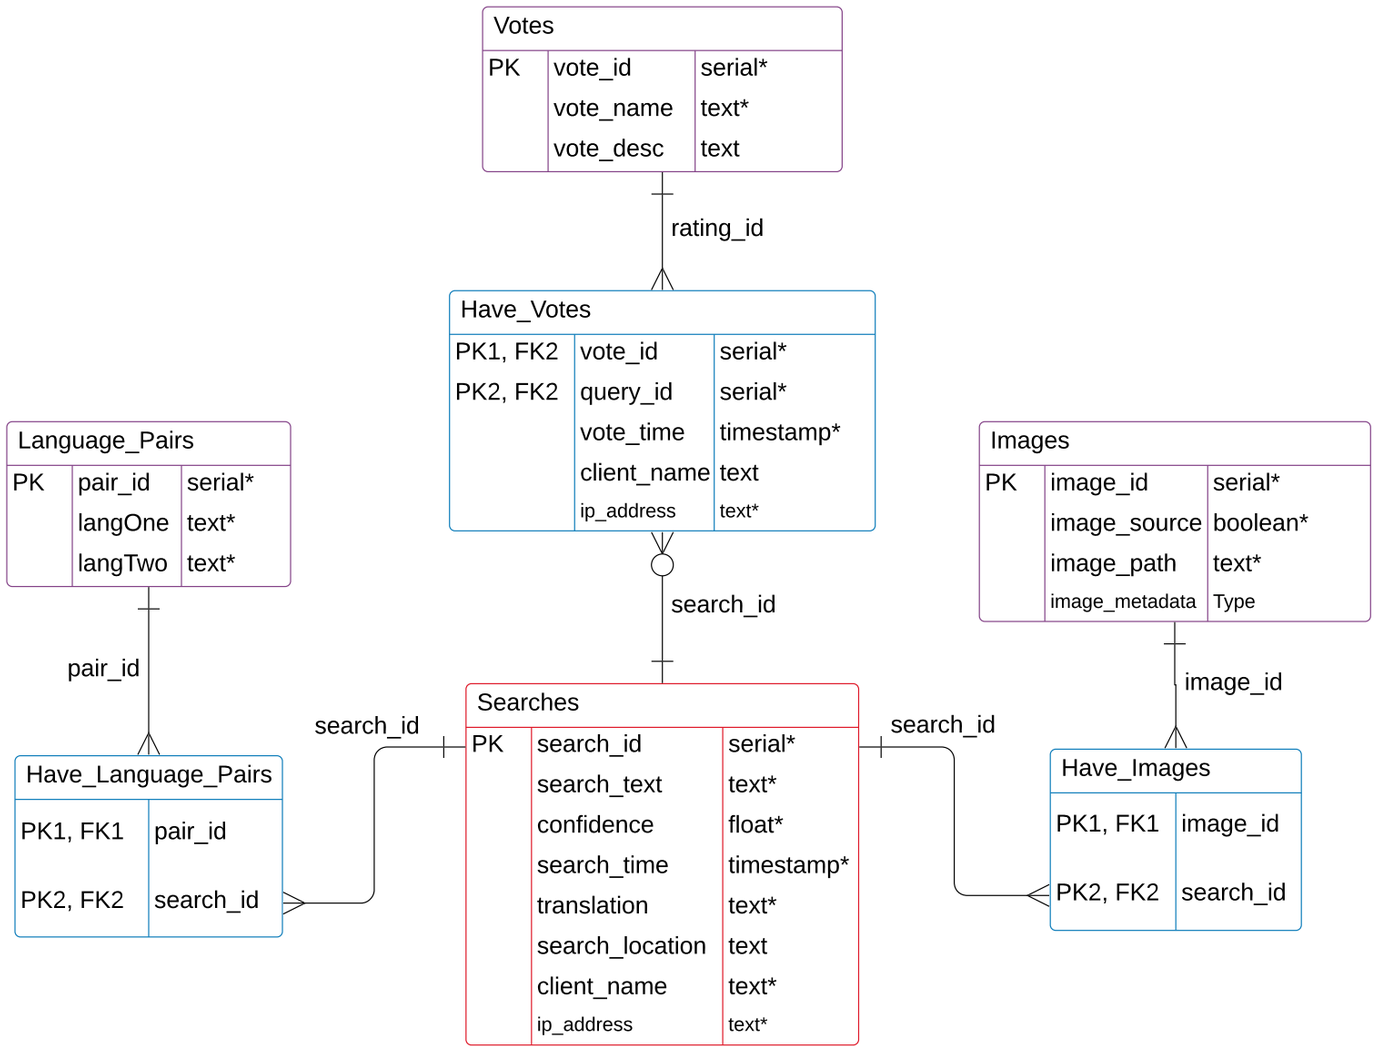
Firewall Entity Relationship (E-R) Diagram

Version 1.1 | April 2020



Not Null

Notes:

Since IP Addresses are being collected, a privacy policy & user agreement should be written and added to website. Additionally, are we required to store them in hashes?

Searches.search_location was added to be able to track queries which were created during a specific installation. Could be added/modified retroactively by queryTime

Have_Votes.client_name and Searches.client_name are to store the name value the user enters when sitting down at the kiosk. For retroactive votes, (e.g. from the website) we would need to prompt website visitors to enter a name in order to make Have_Ratings.user be 'not null'.
